<p>Stainless steel cages require a greater investment up front than do wood or pressboard cages. Made of durable, toxic free material that can retain their integrity for over 50 years, these cages are easy to clean and resist rust and corrosion, making them the safest choices for cages, especially for cats with impaired or precarious health.</p> <p>Funding of <b>\$38,000</b> can improve feline health and veterinary care of Chula Vista Animal Care Facility (ACF) pets.</p>				
<b>1</b>	<b>Stainless Steel Cat Condos</b>	<b>Estimate</b>	<b>Actual (bold)</b>	
<b>1a</b>	Funds will replace three cat "condos" constructed of wood. Given a lifetime of five to six years, wood and pressboard cages must be replaced often. Each seven foot-long condo will house up to four cats, two on the top and two on the lower section, each with separate living and litter spaces. These will be placed in a room in which cats with contagious conditions can be housed separately, away from cats whose health does not require separate quarters.	\$11,800 x 3 = \$35,000 including tax + \$3,000 shipping		Vendor name address Email  Physical Phone
<b>Total</b>		\$38,000
